

deeproot REVOLUTION LLC

Prime Distributor for Deep Root Irrigation

The 30-Minute Test

DRI vs Standard Drip

• 30 minute side by side Deep Root Irrigation vs. drip irrigation.

- The photo to the left shows testing done with Deep Root Irrigation vs standard drip irrigation in clay rich soil. We tested for 30 minutes, side by side, using one gallon per hour emitters.
- Deep Root Irrigation is on the left side.
- Standard drip irrigation is on the right.
- See the DRI-12 below.

This photo shows significantly more saturation achieved in only 30 minutes due to using the D.R.I.-12

This photo shows very limited surface saturation in 30 minutes of standard drip irrigation in the same time, environment, and soil as the photo to the left.

Call us at 707-963-8788 for more information on how the Deep Root Irrigation (DRI) system can save you up to 50% or more in water, energy & fertilizer!
